Note:

*Lamp Life is strongly affected by the number of starts, operating time per start, operating wattage and the ambient temperature of the lamp.

New fluorescent lamps have impurities in them which lamp manufacturers cannot eliminate completely. Lamps must be operated at full intensity for 100 hours before dimming to neutralize the harmful effects of these impurities. Although this may be inconvenient, it is necessary for good dimming performance, and achieving normal lamp life. Without the 100 hours at full intensity, the impurities may cause the lamp to fail within a week (or failure may take months depending on usage and the amount of impurities.)
